

## DATA SECURITY IN MICROSOFT POWER BI

Veselina Naneva, Kremena Stefanova

**Abstract.** *This paper considers securing sensitive information in the business intelligence platform Microsoft Power BI. The standardized methods will be illustrated such as Row-Level Security, Object-Level Security, Access Management, and others. Constraints will be distinguished on different layers such as data, model and access/sharing one. Additionally, it will be suggested a combined technique for implementing multi-level security, which will ensure comprehensive coverage of the main mechanisms for providing protected information, controlling visibility, and managing rights within the chosen product.*

**Key words:** Data Security, Combined Technique, Power BI
